## Conflict Minerals Policy and Statement

Ducati Energia S.p.A. is committed to complying with applicable United States regulations, and in particular with Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, concerning the use of so-called “Conflict Minerals.” Proceeds derived from the extraction and trade of these minerals—particularly those originating from mines located in the Democratic Republic of the Congo and adjoining countries—have historically been used to finance armed conflicts, inter-ethnic violence, and serious human rights abuses, and are therefore associated with the ongoing instability of the region.

Ducati Energia does not directly purchase minerals from mining operations; rather, it procures components, semi-finished goods, and finished products that may contain minerals potentially originating from the so-called Conflict Regions. Given the complexity of global supply chains, the Company is not always able to directly certify the country of origin of the minerals contained in purchased products. Nevertheless, Ducati Energia adopts a responsible and proactive approach toward its suppliers, with the objective of collecting all available information necessary to understand and, where possible, trace the supply chain of the minerals used.

In this context, Ducati Energia actively promotes a policy of transparency and information sharing throughout its supply chain, encouraging its suppliers to cooperate constructively and to provide reliable data regarding the origin of the materials used. The Company also expects its suppliers to implement appropriate due diligence policies, in line with international best practices, in order to ensure, with reasonable assurance, that products and components containing Conflict Minerals originate either from areas outside the Conflict Region or from mines and smelters that have been certified as conflict-free by recognized independent third-party organizations.
